In 2017, diarrhoea was a leading cause of illness in children in Homa Bay, after malaria and upper respiratory tract infections (source: DHIS data).

Recommendations:
- Improve faecal sludge management and ensure water treatment for all
- Ensure children with diarrhoea receive appropriate treatment
- Increase sanitation and hygiene campaigns
- Address social exclusion and discrimination in community and household sanitation
- Adequate allocation of funds for county-wide sanitation programmes.

For more information on these findings, see report:
